INSTALLATION CHECKLIST

For all installed villa systems, the following steps shall be carried out.

01. **Order via the webshop**

Place order in the webshop (include necessary equipment)

02. **Correct electricity trading company/BRP**

Inform customer of conditions with regard to electricity trading company/BRP. See the list of compatible electricity trading companies via the button below.

Compatible electricity trading companies

03. **Install**

Install according to CheckWatt's instructions. You can find the manuals in the Installer Portal via
https://kp.checkwatt.se/installer/documents/

The manuals can also be found at
https://checkwatt.se/installation

Installatörsportalen

04. **Register**

Scan the QR code and fill in the customer and facility details. Alternatively go to
http://register.checkwatt.se

Register

05. **Check**

Check that the CM10 has internet access. Instructions can be found in the installation manual.

After steps 01-05 are completed, the system is tested by CheckWatt within 3-5 working days. Provided that everything works as it should, the system is put into operation.

06. **Monitor**

Site Status gives you an overview of your systems. As an installer, you are responsible for the operation of the systems you have installed, which means that the systems need to be monitored to ensure that everything is working properly. In case of problems that cannot be solved with troubleshooting guides, contact CheckWatt.
